Campus Lost & Found Redesigned

DEFINE

The Problem

Temasek Polytechnic students often lose items daily, but finding lost items is a hassle as there is no centralised lost & found tracking system.

Problem 1 Identified: No real-time tracking or visibility of lost items due to lack of tracking system and delay in reporting

→ When a student loses an item, there is no centralised digital tracking system to confirm whether their item has been found and handed in to the security office. Causing unnecessary stress on them and inability to focus during class due to them not being able to see the status of their lost item.

Problem 2 Identified: no system to confirm peer to peer item returns and motivate students to help

→ Without a system to track or verify that the lost item was successfully returned, these helpful actions go unrecorded, and students will then lack the motivation to report, or return found items. Leading to low engagement and inefficiency in item recovery.

DEFINE {Penny Lim– the student that lost an item}

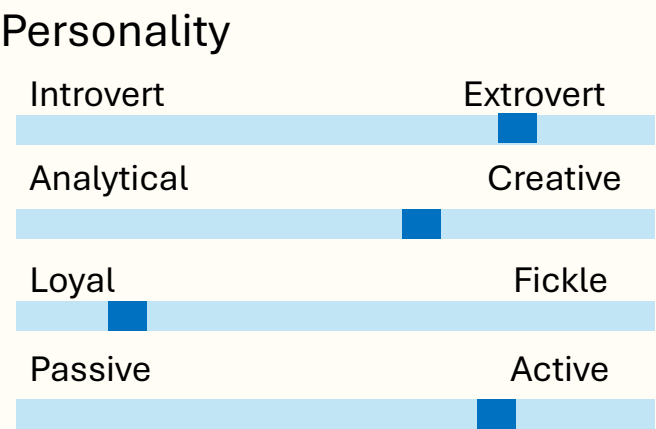

Penny is a 17-year-old science student in Year 2 at Temasek Polytechnic. She is energetic and always in a rush between classes and CCA meetings, therefore she always tend to misplace her personal belongings like her water bottle or wallet that contains her Ezlink card. Penny is very busy and has a lot on her mind, hence her forgetfulness. Due to her frequent habit of losing her items, she would like a simple and straightforward way to track her lost items without causing her the extra anxiety of tracing her every step manually

“It’s scary when I lose my things, I always have to retrace my steps and when I do so and still can’t find it, I feel the stress on top of all my schoolwork. There were multiple times where I was late to class because of this.”

AGE: 17
WORK: Student
FAMILY: Singapore
LOCATION: Temasek Polytechnic
CHARACTER: Very busy with schoolwork

Friendly
Clumsy
Forgetful

Goals

- To stop losing her items, but if she still does lose her things, be able to find them quickly without having to go to so many places while tracing her steps
- Feel less anxious whenever she goes to look for her lost items and keep her mind calm by thinking the step-by-step process of retrieving her lost item
- Save time and energy by calmly going through the process of finding her item, reducing her chance of being late and tired for class again

Frustrations/pain points

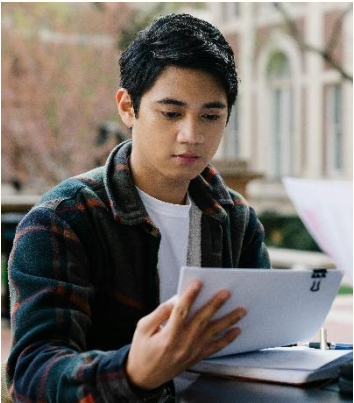

- Stress from losing things with no clear place or location to check as she struggles to retrace her steps at times
- Anxiety from the uncertainty that her item was taken by someone else or that she lost her items forever, causing her to spend extra money unnecessarily to replace it
- Afraid of wasting so much time finding her lost items, being late for classes and being behind of her schoolwork just because her precious time is mostly spent on finding her lost items, just for her not to find it

DEFINE

{Gerald Tan– the student who finds an item}

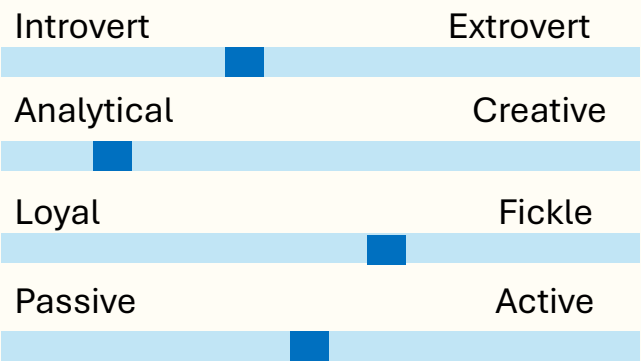

Gerald is an 18-year-old IT student known for being helpful when he needs to and a little laid-back. He is very observant and often spot items laying on tables like wallets and water bottle but never thought to immediately lend a caring hand to help find its owner unless he knows the owner or know that it would be an easy process of identifying and handing it to them. Recognition and small rewards will give him the extra push and motivation to help others consistently.

“I would be willing to help others most of the time, but if it were someone I don’t really know or is familiar with, then maybe not really. If you ask me to help you and you then give me kindness in return, then that’s a win-win”

AGE: 17
WORK: Student
FAMILY: Singapore
LOCATION: Temasek Polytechnic
CHARACTER: helpful at times

- Chill
- Helpful
- Opportunistic

Personality

Preferred Channels

- Recognition
- Speed
- Fairness
- Community
- Gamification
- Convenience

Goals

- Have a smooth, efficient and easy way to return items without having to search for the owner or struggle in having to find them if no one is available to help him do so, especially if it means he must go out of the way just to successfully return it, as it will disrupt his daily routine
- Have a non-awkward and digital way to contact the owner with minimal physical contact with them, as he can be quite awkward
- Feel appreciated, rewarded, or feel a sense of accomplishment for helping others, especially if he decided to go out of the way to help them

Frustrations/pain points

- Feels awkward interacting with people especially if he is not familiar with them. He dislikes being in too much social settings, causing him to struggle if he tries to help complete strangers
- Doesn’t enjoy inefficient processes and long waiting times just to get something done. Hates it when he must get something done, that he knows will cause him a lot of hassle
- Often doesn’t take action if he knows that he won't get much out of it, needs to be very motivated by it in order for him to be convinced to do it. Most of which are thankful appreciations or incentives in return of whatever he helped them with.

Motivations

- Reddit

Lost Item Reporting

- File detailed report with photo, description, last seen location
- Mark item as urgent to alert admins for priority processing
- Real-time status:
Report → Pending match → Claimed → Resolved

Smart Matching System

- Auto-links lost reports with found items using item type, location and time
- Sends instant alerts to owner when a match is detected
- Reduces wait time and eliminates need to visit guardhouse

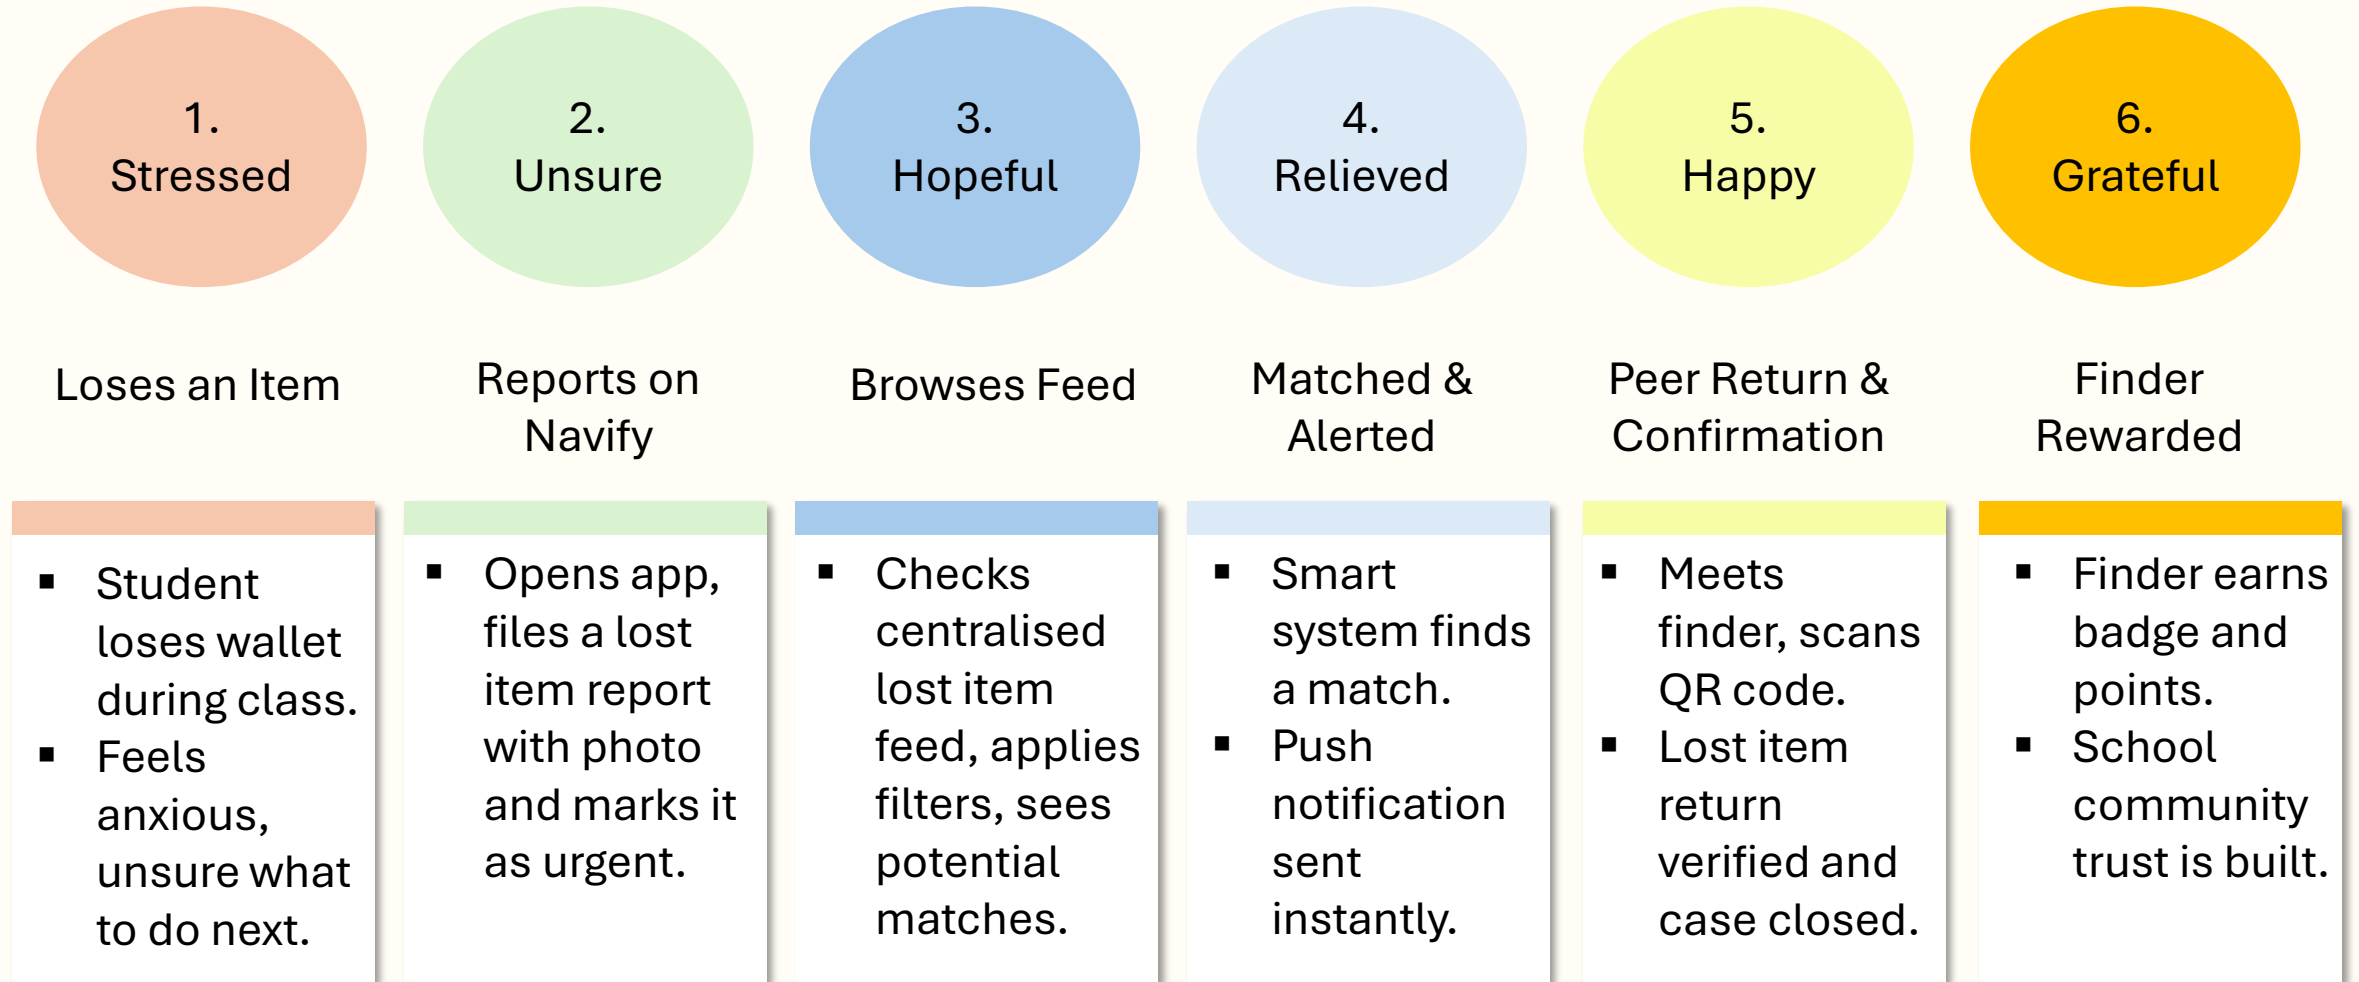

Peer-to-Peer Confirmation

- Secure QR code or PIN verification for item handovers
- Ensures accountability, as both finder and owner of item are recorded
- Triggers reward points and milestone badges for finders

Reward & Badge System

- Finders earn system points for logging items and completing returns
- Milestone badges (e.g. 'First Return') downloadable for portfolios
- Leaderboard promotes friendly community engagement

Mark as urgent
feature

Centralised lost
item display area

Lost Item Report

Smart matching
system

- Gives the user potential matches of all the lost items

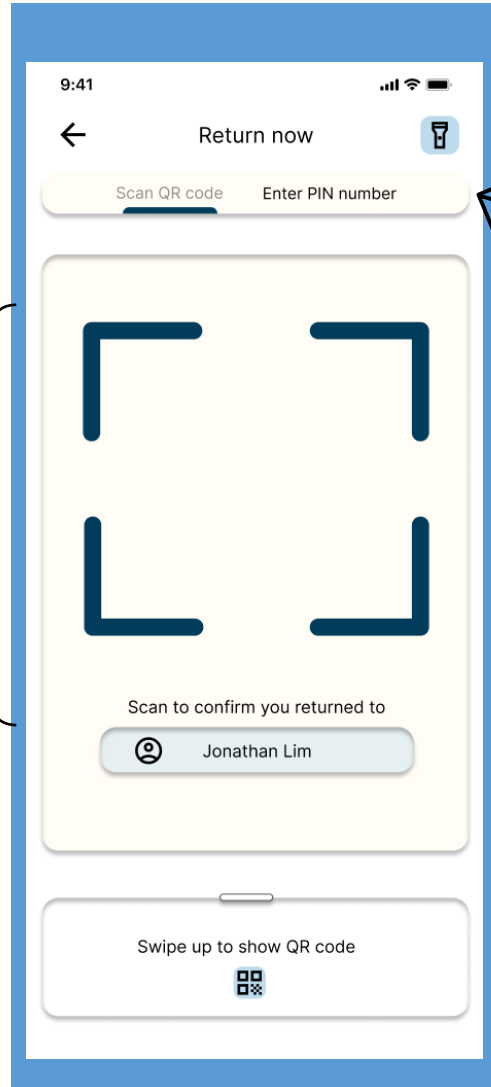

Lost Item History Page

PROTOTYPE

Features for Key Problem 2

Peer to peer confirmation

- The user has to scan the QR code of the finder, while the finder has to scan the QR code of the user
- This ensures accountability and recognition for the finder as this feature verifies peer to peer item returns

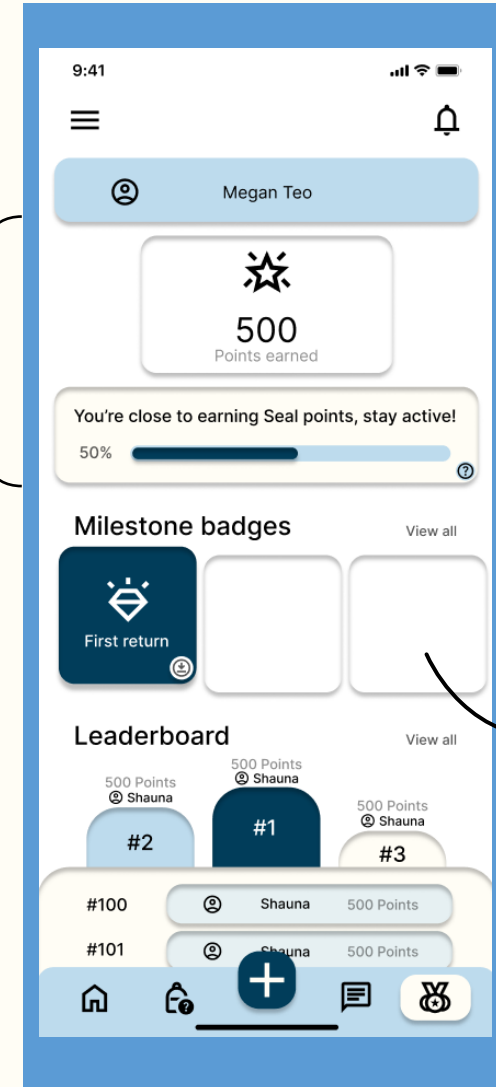

Peer to Peer Confirmation Page

Using the tab bar to allow users to switch between the 2 verification methods

Reward system

- The points shown in the white box are the system points that the student gain from logging found items with helpful details like description of the lost item, and completing a verified return
- The progress bar below shows the number of system points they need left for earning seal points

Reward and Badge Page

Milestone badges

PROTOTYPE

Sprint 1: Lost & Found Core Flow

Goal: Enable the minimum viable lost & found workflow

5

SCRUM 2- Lost Item Reporting with Mark as Urgent
As a **student who lost an item**, I want to **submit a detailed lost item report with the option to mark it as “urgent” if needed**, So that **admins are alerted to priorities my case**.

5

SCRUM 25- Found Item Logging & Peer to Peer confirmation
As a **student who found a lost item**, I want to **log the item I found and confirm its return directly with the owner**, So that **I will be able to feel assured that my effort to return the item is acknowledged by both the system and the rightful owner**.

3

SCRUM 10- Centralised Feed with Search & Filter
As a **student who lost an item**, I want to **search and filter found items by date, item name, location, time, or colour**, So that **I will be able to efficiently identify my lost item**.

Total: 13 Story Points

Agile Sprint Planning

Sprint 2: Lost & Found Enhancement

Goal: Introduce enhancements for lost & found experience

8

SCRUM 19- Real-Time Status Dashboard & Notifications
As a **student who has submitted a lost item report**, I want to **view a real-time status dashboard that shows the progress of my report at every stage**, So that **I will be able to stay informed about the status of my lost item**.

5

SCRUM 32- Reward System, Badges & Leaderboard
As a **student who found a lost item**, I want to **earn points, badges based on my verified contributions**, So that **I will be able to feel acknowledged for my efforts and stay motivated to continue using the app**.

3

SCRUM 49 - Return History Log & History Download
As a **student who participated in the lost and found process**, I want to **view a history log of all items I have helped logged, returned or successfully retrieved through the app**, So that **I can keep a personal record of my involvement and optionally download my return contributions to include in my portfolio**.

Total: 16 Story Points

PROTOTYPE

User Testing Feedback Capture Grid

LIKE (What users liked)

- Lost & found forms clearly labelled, neatly aligned, and consistent between both form types
- Filter options highlighted in bright blue when selected
- Leaderboard podium layout neat and easy to follow, points displayed in large, noticeable font
- Chat tabs split into "Lost" and "Found" for efficient, organised access

WISHES (Things to improve)

- Date/time text on real-time status dashboard too small, dashboard section itself needs more space
- Buttons (Contact, Follow Up, badge download icon) too small, hard to tap
- QR swipe-up section on return page lacked arrow indicator, not obvious it was expandable
- Status follow-up pop-up too text-heavy and overwhelming

QUESTIONS (Questions that came up)

- Should I press the "Return now" button at the top of the chat page?
- Should I toggle on the "request user to collect item from security" button in the found item logging form?
- What should I do next now that I am on the item history page?
- What does the follow up feature do, does it send a thank you message to the finder?

IDEAS (Ideas from experience)

- Add a short onboarding tutorial explaining key features and confusing terms on first launch
- Replace "?" icon with "More Info" label, and add tooltips next to unclear toggles
- Enlarge buttons, dashboard section, and font sizes, add arrow indicators wherever needed
- Add a points breakdown section to show users how actions like logging items can earn them points

Impact of Navify

Improved Transparency:

Improved transparency in the lost & found process through real-time status tracking and notifications

Reduced Stress & Uncertainty:

Reduced stress and uncertainty for students by providing clear item recovery workflows

Encouraged School Community Participation:

Encouraged peer participation and accountability through verified return confirmation and reward systems

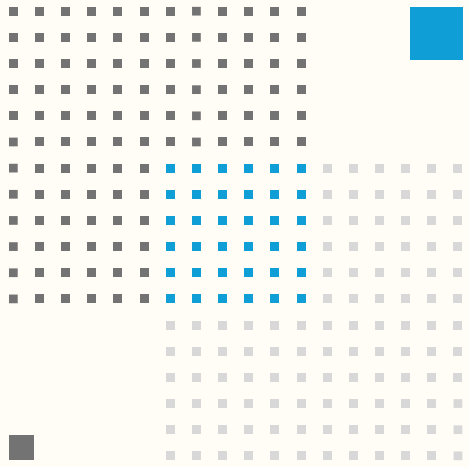

More Organised & Efficient:

Created a more organised and efficient system for both students and campus staff

Enhanced User Trust:

Enhanced user trust through structured guidance, tracking, and communication features

Thank You!
